Potential Mobile Bird Rehabilitation Unit Deployment Locations in Coastal Counties

In general, the following deployment site needs (established for a single Mobile Bird Rehabilitation Unit [MRU]) should be considered prior to deploying mobile oiled bird rehabilitation units:

1. Interior space: 10,000 square feet (ft²) of concrete or asphalt (not gravel) under cover, ideally with loading dock. If interior space is not available, then combine this space requirement with Item 2, below.
2. Exterior space: 5,000 ft² of concrete or asphalt (not gravel) adjacent to interior space above.
3. Parking spaces for six semi-trailers adjacent to above. Two spaces will be designated for fixed-axle (20,000-gallon) water tanks.
4. Parking spaces for 40 personal vehicles (staff, visitors, etc.)
5. On-site fresh water: Hydrant is the preferred option. Note: the estimated minimum volume of freshwater required over the duration of a response will be 50,000 gallons total (18,000 in pools, 30,000 for wash/rinse, 2,000 wash down). Note that this assumes pool water filtration and reuse is accomplished. **Also, water hardness must test to (or be adjusted to) 2-5 gr.**
6. Vehicle access for a semi-tractor and trailer.
7. Ability to deploy perimeter fencing with locking gates.
8. Security: 24/7 security of site will need to be established.
9. Restrooms/break rooms (serving 30 persons) will be required on site.
10. Personnel support: Motel and restaurant (serving 30 persons) should be located within reasonable distance of deployment site.
11. Local services: Bulk propane supplier and equipment rental (especially generator and fencing) should be available within a reasonable distance of the deployment site.

The following locations are believed to meet the above location requirements and may be available for use in the deployment of the MRUs. Note that not all locations may be suitable for drill deployments due to a lack of sufficient interior space.
